

Feedback & Critical Incidence

Description of columns in the table are as follows:

Prototype Screen/Page:

Which screen of the user interface the user was evaluating at the point of feedback/critical incidence/problem.

Reference:

This column should be used to relate an item back to a specific point in the session. The reference can be to a specific line number in the transcript above or a time code.

User feedback / critical incidence / problem:

This column may contain :

- Feedback (positive or negative) given by the users, **or**
- Critical incidences (breakdowns or problems encountered by users) and/or mistakes committed by users.

Reason for negative feedback / breakdown:

Briefly explain the reason for a breakdown or any negative feedback.

Scope:

Describe the scope of the feedback or the problem; include whether the scope of the issue is throughout the system/device or within a specific screen or screens. If the problems are specific to a page, include the appropriate page reference.

Severity (H/M/L) :

Your assessment as to whether the implication of the feedback is *low*, *medium*, or *high* severity, and the **justification** for that rating.

Way(s) to rectify:

Suggestion for the modifications that might be made to the user interface to address the issue or issues in this row. You **MUST** include trade-offs to be credible. If you can't think of some bad trade-off, say so.

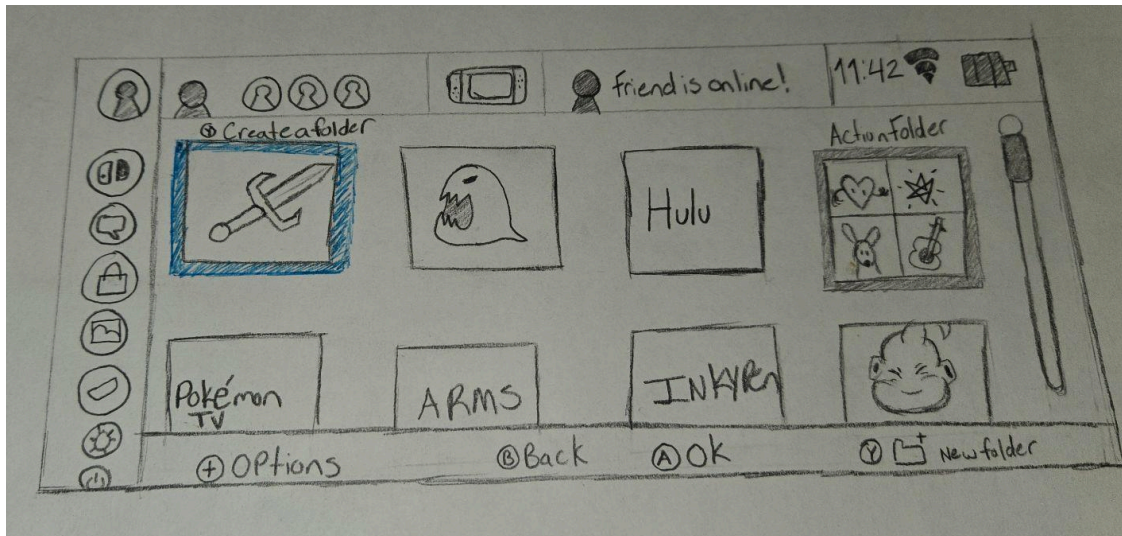

Usability Evaluation Feedback Analysis

#	Prototype Screen Provide link to images and circle relevant part with optional annotations	User's feedback/ critical incidence/ problem	Reason for negative feedback / breakdown	Scope which interface /function is impacted	Severity (High/ Medium/ Low) and Justification for giving that rating	Way(s) to rectify and any Tradeoffs (i.e., why the fix might not work)
1	See Picture 1	User felt that some of the icons should have been bigger to give more indication to the user [P13]. User felt as though the top bar should be erased and instead show other information like news headlines or friends that are online [P14]. User had difficulty finding out how to create a folder. [P11, P17]. User had difficulty finding the news button on the homescreen. [P10, P16]	Icons might make it easier for those using just the nintendo switch screen to notice. [P13] All of the negative space at the top could be used for other things. [P14].	Home Screen (News button, folder creation, status bar)	High, there were many issues users had with the home screen.	We could fill the negative space with more interactions. [Tradeoff] This may not be productive as it can be overwhelming for some users. Changing the icon of the news menu tab so it becomes a more recognizable icon to indicate that it would be for news rather than a message.

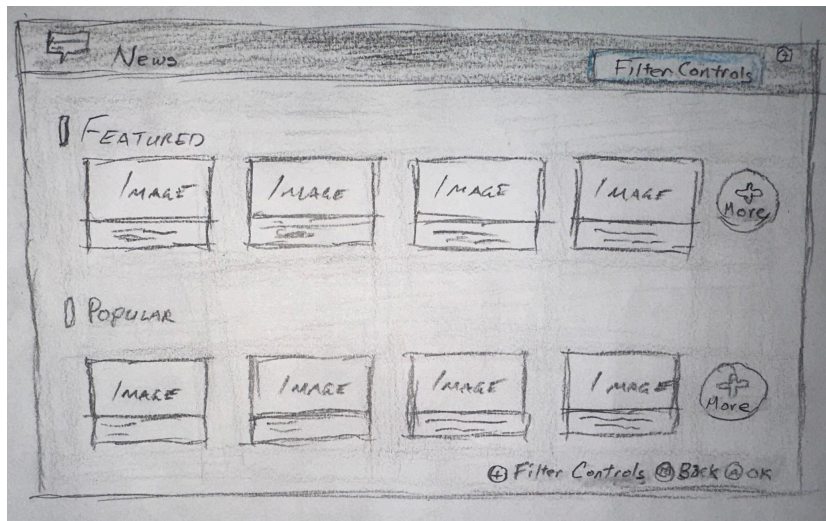

2	See Picture 2	User felt that they should rename the filter controls button to a find channels or just search bar and then another button that shows all of the channels that the user has subscribed to. [P12, P13, P14] User didn't know what the filter was for before clicking. [P16, P17, P18]	Making it say filter controls might make it harder for users to identify the meaning of the button and there is also no option to check the number of new channels the user is subscribed to.	News Page	Medium to high as most users felt it was necessary to point out that the filter controls tab was too confusing for users to understand at first glance.	Rename "Filter Controls" button to "Find Channels" or "Search". Implement a button/section for subscribed channels.
3	See Picture 3	No issues for P16, P17, or P18. Too many searches on the eShop page. [P10] Felt as though when highlighting the game icon there should be a feature where the game is maximized to show a brief description of the game and some pictures or videos of the gameplay. [P13, 15]. There should be a tab that shows recently purchased games or games that friends already own. [P14].	Might make the shop page seem more fluid and would better help the user scroll through games faster. If a specific person has a game that you're trying to find the name of or want to see what a majority of them are playing you can.	Shop Page	Low as there weren't problems with new features; however, there could be improvements made.	Add a section to the shop filled with games owned by friends. (Tradeoff: Just because a friend owns a game doesn't mean they like it. Instead, we can add a "Recommend this game" button on game pages with a "Recommended by friends" page on the shop)

4	See Picture 4	User needed help finding out how to use the hue changer. [P13,P14,P15,P18]. User didn't understand the use of both the custom button and the color wheel as well as the brightness slider. [P14].	The circle color changer with just a "Hue" title above it is confusing for users.	Theme Settings	High as most users were confused by this feature and felt that it should be changed to make it easier for users to understand.	Change "Hue" to "Choose a color" and replace the circle with a bar or a table of pre-selected colors to choose from. Having a designated are on the screen to show the exact color of what the user is trying to select.
5	See Picture 5	Users were unsure what to do when creating a folder. [P12, P16, P18]. Adding a screen to show how the folder creation works. For example a layout of all the games and up top where it tells user to add games, they press done, and the folder is created.	Should include labels	Folder Creation	Medium to High because users had no idea what to do.	Separate folders into a different page with more clarity on how to add additional games to a created folder. Change "New Folder" to "[View] Folders Page".
