**Brief Description
of User**

P6 User is a 34 year old man who is very into sports and likes to do things such as construction and has a general knowledge of things such as gardening tools, hardware tools, and electrical circuits. He does not play games a lot but has played them in his youth.

Feedback & Critical Incidence

<< Record your observations in the table on the following page, based on your observations and notes taken during the usability evaluation

Description of columns in the table are as follows:

Prototype Screen/Page:

Which screen of the user interface the user was evaluating at the point of feedback/critical incidence/problem.

Reference:

This column should be used to relate an item back to a specific point in the session. The reference can be to a specific line number in the transcript above or a time code.

User feedback / critical incidence / problem:

This column may contain :

- Feedback (positive or negative) given by the users, **or**
- Critical incidences (breakdowns or problems encountered by users) and/or mistakes committed by users.

Reason for negative feedback / breakdown:

Briefly explain the reason for a breakdown or any negative feedback.

Scope:

Describe the scope of the feedback or the problem; include whether the scope of the issue is throughout the system/device or within a specific screen or screens. If the problems are specific to a page, include the appropriate page reference.

Severity (H/M/L) :

Your assessment as to whether the implication of the feedback is *low*, *medium*, or *high* severity, and the **justification** for that rating.

Way(s) to rectify:

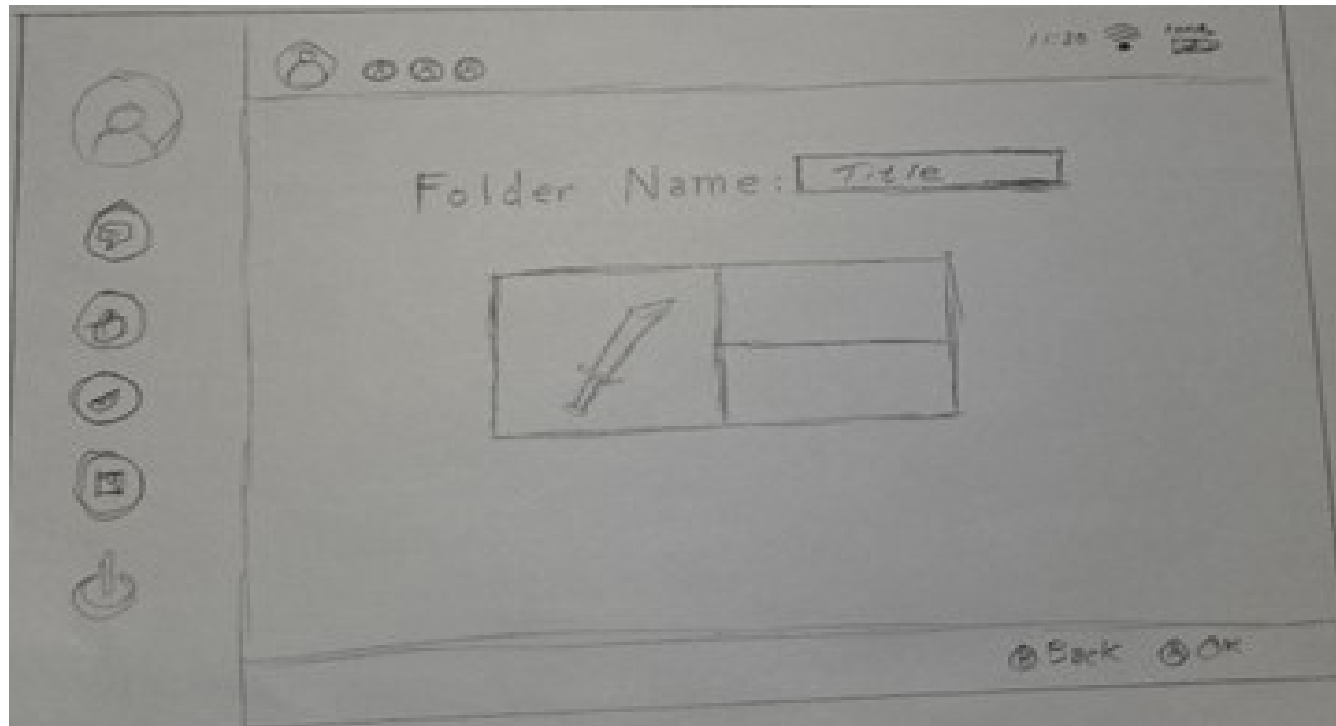

Suggestion for the modifications that might be made to the user interface to address the issue or issues in this row. You **MUST** include trade-offs to be credible. If you can't think of some bad trade-off, say so.

Usability Evaluation Feedback Analysis

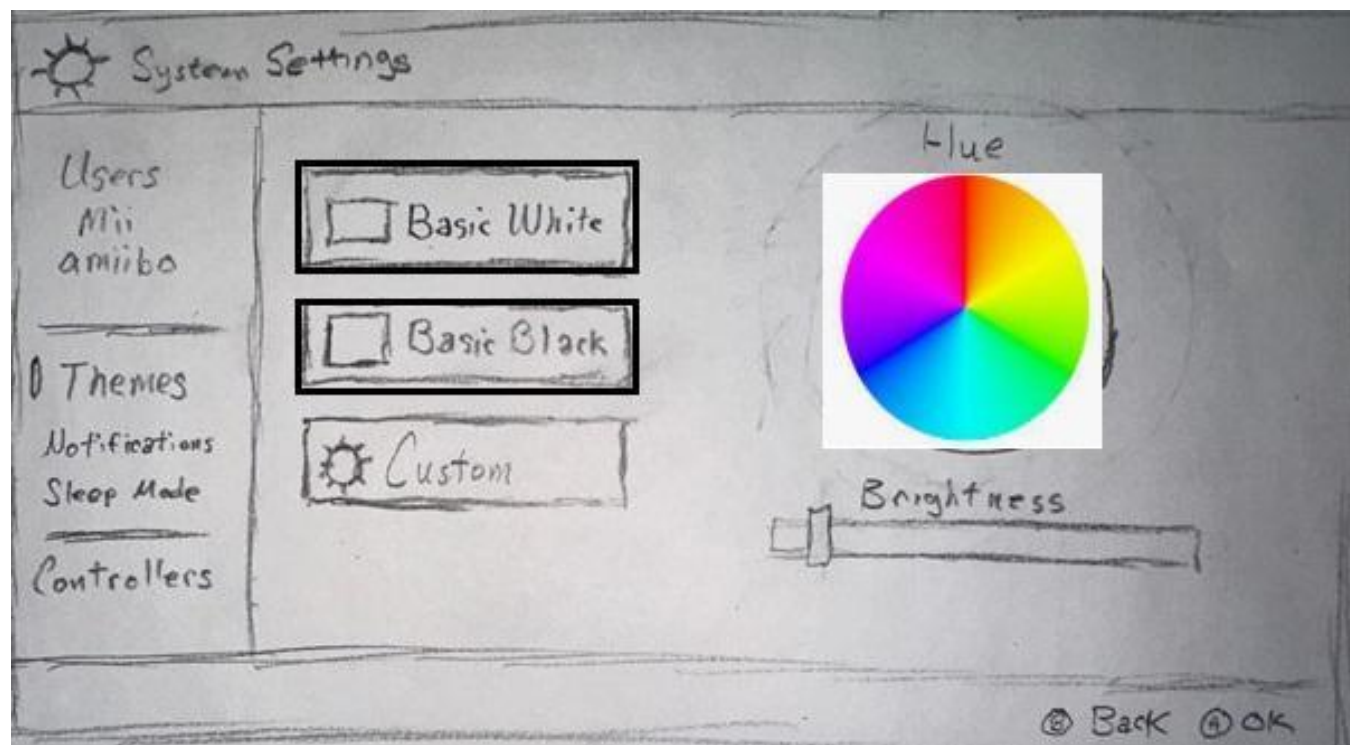

#	Prototype Screen Provide link to images and circle relevant part with optional annotations	Reference e include line number(s) in specific transcript for the identified issue	User's feedback/ critical incidence/ problem	Reason for negative feedback / breakdown	Scope which interface /function is impacted	Severity (High/ Medium/ Low) and Justification for giving that rating	Way(s) to rectify and any Tradeoffs (i.e., why the fix might not work)
1	See Picture 1		One way to improve the folder making feature would be to show all of the applications on a grid and you just select a number of games that you want in your folder and press a button that just adds it all.	It might make it seem more easier to access and easier to use for users who are not as used to the console.	The Home Menu	Medium since making the folders might make it easier to create and better customize the games that you want.	One way to fix this is by making the icons on the left just a bit smaller so it can make more room for the games you're trying to navigate through.
2	See Picture 2		One thing that might make it a little confusing is the brightness bar which should probably be better fit on another part of the system settings since it could be replaced with something that shows the recent colors you have chosen.	The reason is that there is a custom button when there is already a color wheel so the user might be a little confused about what differentiates the two options.	The Theme tab of the settings menu	High since changing the color of the background should be simple and easy to utilize.	One way to fix the problem would be to keep the custom button which could show you to a grid of colors.

3	See Picture 3		The eshop appears to look a little too cluttered and there is too much in the screen which could make it a little harder for the user to focus on just one thing.	Making the eshop feel too cluttered could confuse the user to where the user might feel a bit overwhelmed by everything on the screen.	The Eshop Menu	Low since the shop is a good design but it might be good to consider those who take a bit longer to analyze aspects of the screen.	One of the ways to fix it is by experimenting with sizing of certain icons and the game icons to make things feel more compact and like they actually fit with each other and an option for touchscreen users to go back in the shop.
4	See Picture 4		The news seems like a good idea the only thing that seems like it might need more changing is the filter controls as they did not understand what that mean at first and a instead have an option that lets you search for specific news channels.	Sometimes users are looking for words that they find familiar or icons that they recognize like a magnifying glass to show that they can search for something so it makes it easier.	The News Menu	High since it might turn people off from using the application from finding it too complicated to navigate.	One of the ways to fix it is by having a button that shows all of the channels that you have subscribed to and also a search button that indicates it is used to search for a specific news channel.
