**Brief Description
of User**

P4User is a 17 year old high school student he plays football and enjoys playing on home consoles such as the Xbox and the Nintendo Wii system. He does not own a switch and does not plan on owning one.

Feedback & Critical Incidence

<< Record your observations in the table on the following page, based on your observations and notes taken during the usability evaluation

Description of columns in the table are as follows:

Prototype Screen/Page:

Which screen of the user interface the user was evaluating at the point of feedback/critical incidence/problem.

Reference:

This column should be used to relate an item back to a specific point in the session. The reference can be to a specific line number in the transcript above or a time code.

User feedback / critical incidence / problem:

This column may contain :

- Feedback (positive or negative) given by the users, **or**
- Critical incidences (breakdowns or problems encountered by users) and/or mistakes committed by users.

Reason for negative feedback / breakdown:

Briefly explain the reason for a breakdown or any negative feedback.

Scope:

Describe the scope of the feedback or the problem; include whether the scope of the issue is throughout the system/device or within a specific screen or screens. If the problems are specific to a page, include the appropriate page reference.

Severity (H/M/L) :

Your assessment as to whether the implication of the feedback is *low*, *medium*, or *high* severity, and the **justification** for that rating.

Way(s) to rectify:

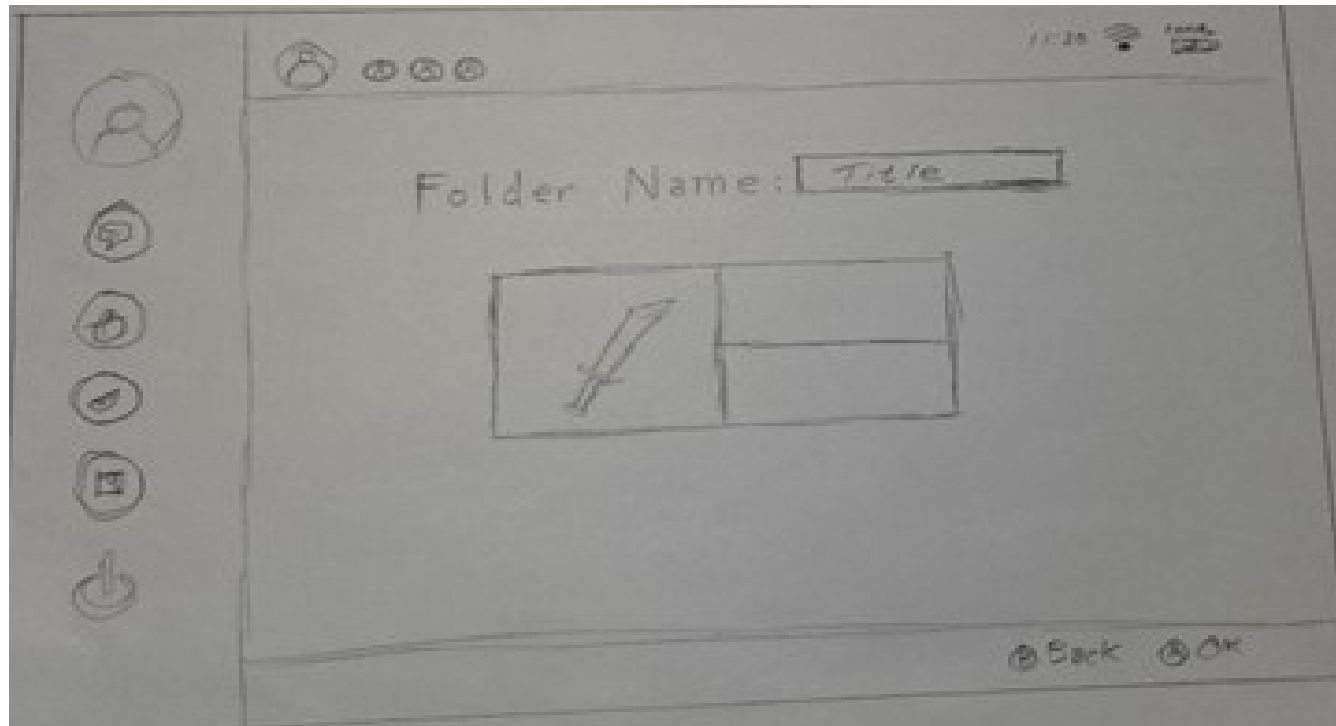

Suggestion for the modifications that might be made to the user interface to address the issue or issues in this row. You **MUST** include trade-offs to be credible. If you can't think of some bad trade-off, say so.

Usability Evaluation Feedback Analysis

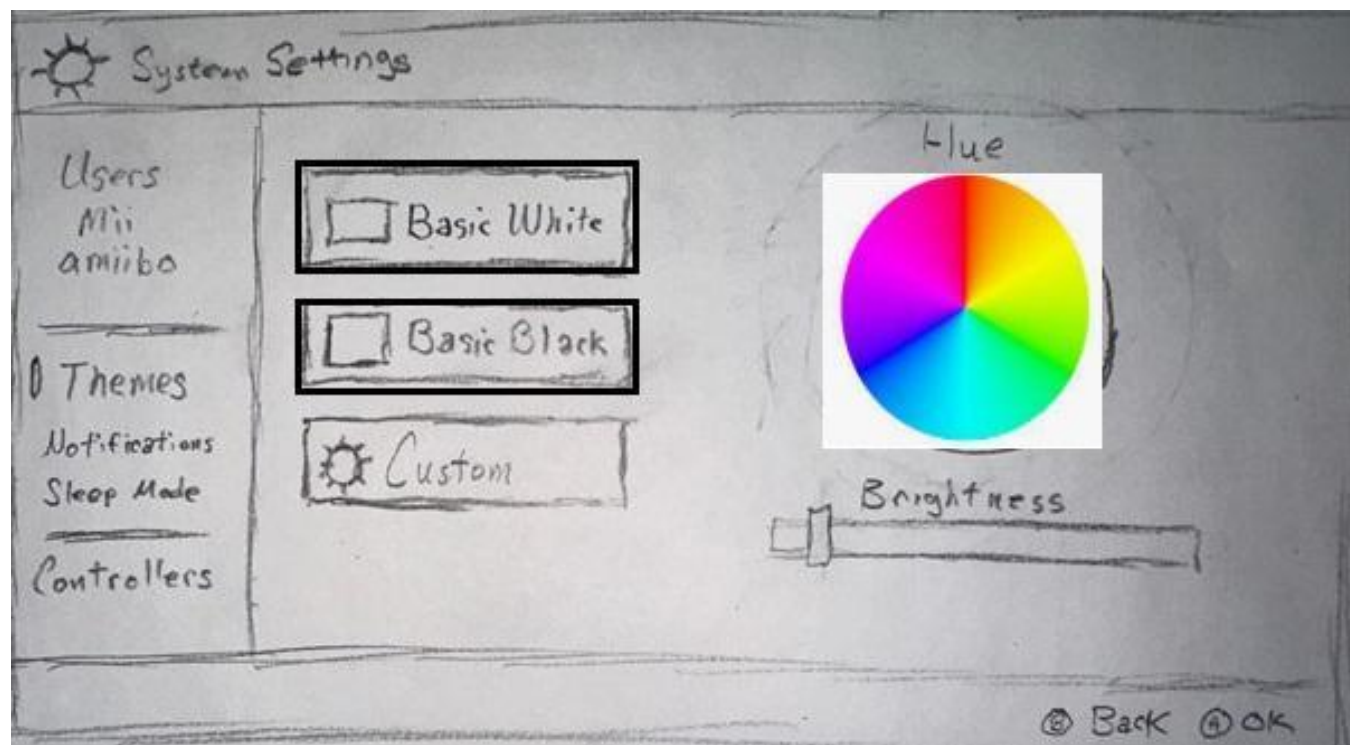

#	Prototype Screen Provide link to images and circle relevant part with optional annotations	Reference e include line number(s) in specific transcript for the identified issue	User's feedback/ critical incidence/ problem	Reason for negative feedback / breakdown	Scope which interface /function is impacted	Severity (High/ Medium/ Low) and Justification for giving that rating	Way(s) to rectify and any Tradeoffs (i.e., why the fix might not work)
1	See Picture 1		They believe that the menu showing all of the icons should be at the top and bigger and that the friends list should be to the left.	They believe that someone would naturally be looking at the top of the screen and would notice that menu first and try to interact with it.	The home menu	Low since they said that even though it is on the side, it is still pretty noticeable in the screen.	They believe that by having the icons be bigger it might just be an easier issue than having them at the top since older users might struggle navigating from top to bottom with the icons. However one fix could be to have the icons be at the bottom instead however that would obstruct the menu that displays what the buttons do.
2	See Picture 2		They believe that the screen to change the background color is good, however they think that it would just be easier to instead have a grid that makes it easier to hand pick out which colors you think look nice.	They feel as though it might be a bit hard to use the left stick to move the cursor around to get the exact color that they might want	The theme menu	Medium as they feel it could improve the quality of the theme menu	Having two options to either pick from a color wheel or have a grid of colors so that people have an easier time deciding and those that want a simple color could also pick easily.

3	See Picture 3		They feel as though there should be an option like Netflix where just hovering above the game you want to play will zoom in on the game and maybe show a big display of the game or small clip showing the gameplay.	They feel as though the menu would look similar to the regular design which is so static and boring, having a more loose design might make it more appealing.	The eshop menu	High since maybe they would rather want to see the a preview of the game rather than just having to click on every single one.	Maybe by having the .emu part that shows the featured games, best sellers, and new deals could be on the top and instead the games could be under it and instead it could be scrolling situation to fit more games on there rather than being a grid and maybe when you search a game it's a grid like Netflix.
4	See Picture 4		They believe that something that would be better than using a filter controls button would be to have a search button and within that certain search bar you can look up certain topics like the types of games or which category.	They believe that not everyone will understand what filter controls means	The news Menu	medium	It could be fixed by having a button where you can search certain news channels to much like the eshop menu and be able to select which news channel you would like to subscribe to.
5	See Picture 5
