SIGNATURES:

Brief Description of User

P5 User is a 26 year old female who has a switch and also is into things like decorating, interior design, scrapbooking. She also has knowledge of doctoral topics like anesthesiology. She has a moderate understanding of gaming systems and how they work.

Feedback & Critical Incidence

<< Record your observations in the table on the following page, based on your observations and notes taken during the usability evaluation

Description of columns in the table are as follows:

Prototype Screen/Page:

Which screen of the user interface the user was evaluating at the point of feedback/critical incidence/problem.

Reference:

This column should be used to relate an item back to a specific point in the session. The reference can be to a specific line number in the transcript above or a time code.

User feedback / critical incidence / problem:

This column may contain :

- Feedback (positive or negative) given by the users, **or**
- Critical incidences (breakdowns or problems encountered by users) and/or mistakes committed by users.

Reason for negative feedback / breakdown:

Briefly explain the reason for a breakdown or any negative feedback.

Scope:

Describe the scope of the feedback or the problem; include whether the scope of the issue is throughout the system/device or within a specific screen or screens. If the problems are specific to a page, include the appropriate page reference.

Severity (H/M/L) :

Your assessment as to whether the implication of the feedback is *low*, *medium*, or *high* severity, and the **justification** for that rating.

Way(s) to rectify:

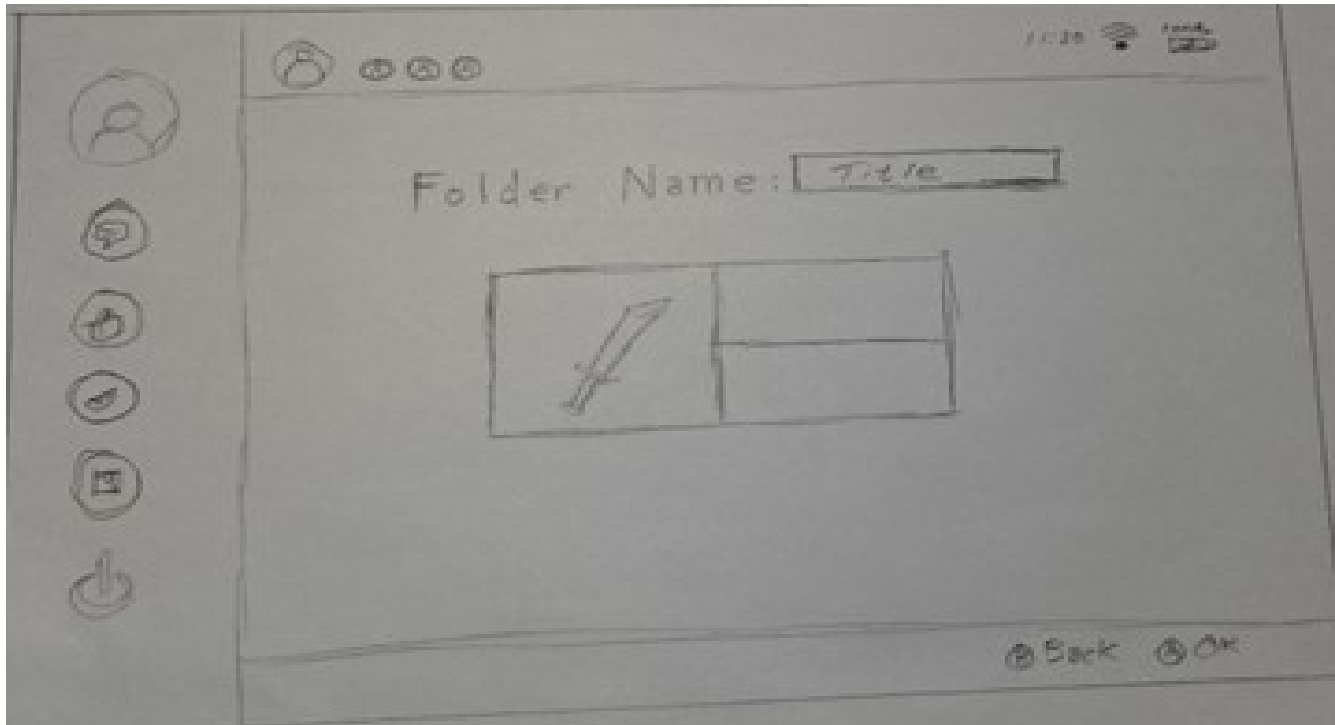

Suggestion for the modifications that might be made to the user interface to address the issue or issues in this row. You **MUST** include trade-offs to be credible. If you can't think of some bad trade-off, say so.

Usability Evaluation Feedback Analysis

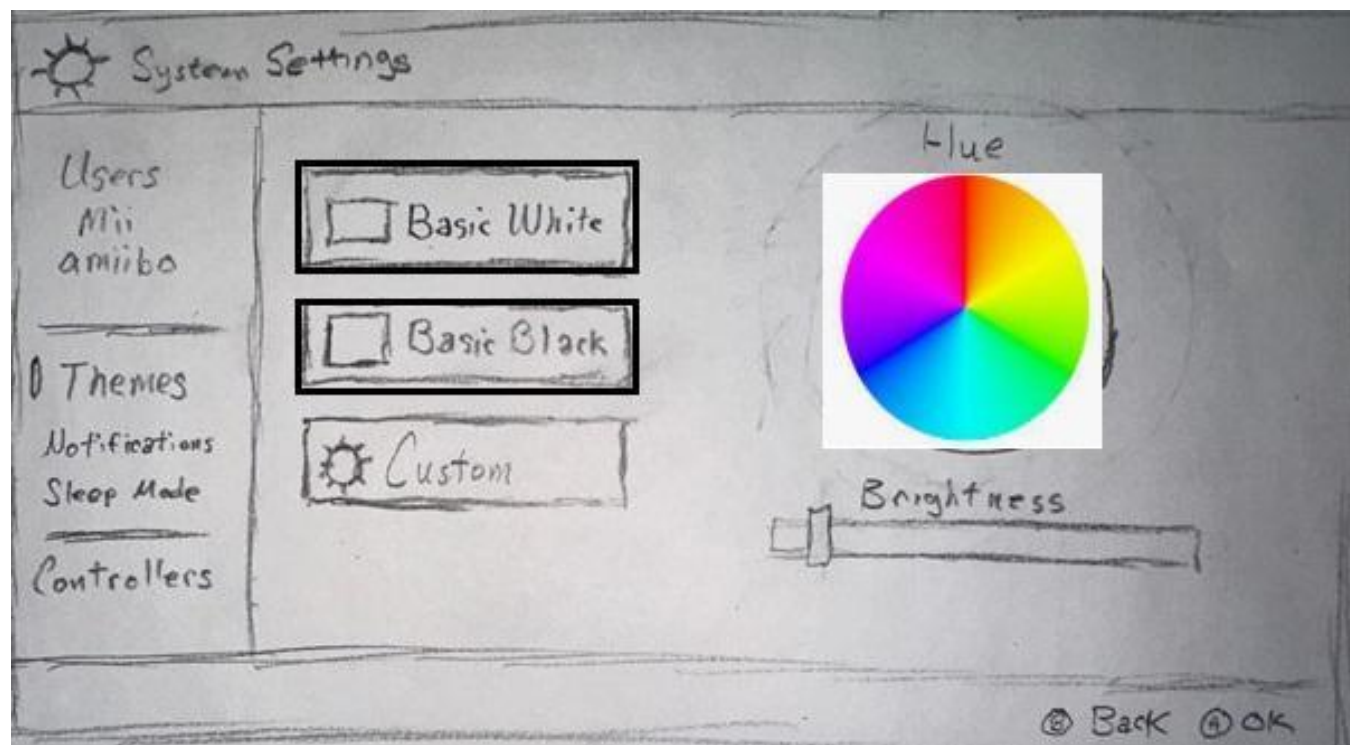

#	Prototype Screen Provide link to images and circle relevant part with optional annotations	Reference e include line number(s) in specific transcript for the identified issue	User's feedback/ critical incidence/ problem	Reason for negative feedback / breakdown	Scope which interface /function is impacted	Severity (High/ Medium/ Low) and Justification for giving that rating	Way(s) to rectify and any Tradeoffs (i.e., why the fix might not work)
1	See Picture 1		One problem could be the friends list as it could be used to display other information like which friends are online or certain things that have happened in the news tab to remind you to check in on it.	She believes that there is just so much open space between the friends list and the other indicators such as the battery, time and wi-fi connection.	The Home Menu	Medium since it could just make the home screen feel more full and fluid	One way to rectify this would be to get rid of the space occupying the friends list and instead have a line fade in to display relevant information such as friends online and news happening on the channel.
2	See Picture 2		One thing would be to have something that would make it easier to select the colors that you want and maybe a specialized square to indicate the color you are using on the color wheel.	The color wheel might make it a bit more complicated for older users or users who have difficulty finding the color they want and might make them feel discouraged to it	The change theme section of the settings	High since it might turn off a certain demographic of people who wish to actually change the color to something other than black and white.	One way to rectify the topic would be to have a section that has selected colors or even certain themes from other games that you can add with characters and stuff like that. Also an option to change the text to better fit the background.

3	See Picture 3		She wonders what the point of the game library tab would be, maybe games that you have recently purchased? Another could also be to make the tiles a bit bigger and give more information other than just the title like the genre or price.	When scrolling through games like in the PlayStation store or even the Xbox store there's a designated space for where you have the game highlighted and it gives a description of the game and some photos or videos of the gameplay.	The Eshop Menu	Medium since it could make it easier for people to just skim through the games rather than just click on every single one to get the description.	Putting just a bit more information on the game tiles to give more detail on the game like the genre, price, and maybe the rating of the game.
4	See Picture 4		There was not much critique on the news menu other than changing the name from filter controls and just keep it to the find channels button like in the original design and having a scroll bar.	Sometimes when people have news pop up they might be subscribed to a lot of channels so maybe they might not know what's new and having filter controls might confuse the user.	The News Menu	Medium since they could just go on the news menu to check it themselves but it could also remind them to check the menu more often if they're reminded there are ne posts.	By replacing the words filter controls with just find channels and instead having a little blue circle on the home menu and maybe showing little icons of the channels you're subscribed to at the top to give a better indicator of which channels you're looking at.
